# Audio/video, information and communication technology equipment Part 1: Safety requirements

Report Number. ....: AOC250516026S

Date of issue .....: 2025-06-04

Total number of pages .....: 79 pages

Name of Testing Laboratory Shenzhen AOCE Electronic Technology Service Co., Ltd

preparing the Report .....: Room 202, 2nd Floor, No.12th Building of Xinhe Tongfuyu Industrial

Park, Fuhai Street, Baoan District, Shenzhen, Guangdong, China

Applicant's name.....: Shenzhen Yifan Tong Technology Co., Ltd

Address .....: 506/5F, Bld-A, Quanju Industry Park, No.21, Jiangshi Rd,

Guangming Dist, Shenzhen, China.

**Test specification:**

4	GENERAL REQUIREMENTS		Р
4.1.1	Acceptance of materials, components and subassemblies	(See appended Table 4.1.2.)	Р
4.1.2	Use of components	Components which are certified to IEC and/or national standards are used correctly within their ratings. Components not covered by IEC standards are tested under the conditions present in the equipment. See also Annex G	Р
4.1.3	Equipment design and construction	Evaluation of safeguards regarding access to ES3 and to limiting the outputs to fulfill ES1, and protection in regard to risk of spread of fire, mechanical-caused injury and thermal burn considered.	Р
4.1.4	Specified ambient temperature for outdoor use (°C)		N/A
4.1.5	Constructions and components not specifically covered		N/A
4.1.8	Liquids and liquid filled components (LFC)		N/A
4.1.15	Markings and instructions	(See Annex F)	Р
4.4.3	Safeguard robustness		Р
4.4.3.1	General		Р
4.4.3.2	Steady force tests	(See Clause T.5)	Р
4.4.3.3	Drop tests		N/A
4.4.3.4	Impact tests	(See Clause T.6)	Р
4.4.3.5	Internal accessible safeguard tests		N/A
4.4.3.6	Glass impact tests		N/A

Sifying the acoustic output $L_{Aeq,T}$ , ements are based on the A-weighted ent sound pressure level over a 30 s period.  Sic where the average sound pressure (long eq, $\tau$ ) measured over the duration of the song than the average produced by the eme simulation noise, measurements may be er the duration of the complete song. In this becomes the duration of the song.  Sissical music, acoustic music and broadcast typically erage sound pressure (long term $L_{Aeq,T}$ ) which is much the average programme simulation noise. Therefore, if is capable to analyse the content and compare it with mme simulation noise, the warning does not need to be ong as the average sound pressure of the song does do the required limit.  Sole, if the player is set with the programme simulation of SdB, but the average music level of the song is only 65 s no need to give a warning or ask and degement as long as the average sound level of the song we the basic limit of 85 dB.

	Except as given below, protection requirements for parts accessible to ordinary persons, instructed persons and skilled persons are given in 4.3.	
	NOTE 1 Volume control is not considered a safeguard.	
	Between RS2 and an ordinary person, the basic safeguard may be replaced by an instructional safeguard in accordance with Clause F.5, except that the instructional safeguard shall be placed on the equipment, or on the packaging, or in the instruction manual.  Alternatively, the instructional safeguard may be given through the equipment display during use

	An <b>equipment safeguard</b> shall prevent exposure of an <b>ordinary person</b> to an RS2 source without intentional physical action from the <b>ordinary person</b> and shall automatically return to an output level not exceeding what is specified for an RS1 source when the power is switched off.	
	The equipment shall provide a means to actively inform the user of the increased sound level when the equipment is operated with an output exceeding RS1. Any means used shall be acknowledged by the user before activating a mode of operation which allows for an output exceeding RS1. The acknowledgement does not need to be repeated more than once every 20 h of cumulative listening time.	
	NOTE 2 Examples of means include visual or audible signals. Action from the user is always needed.	
	NOTE 3 The 20 h listening time is the accumulative listening time,

	In addition to the normal operating conditions, all controls adjustable from the outside by hand, by any object such as a tool or a coin, and those internal adjustments or pre-sets which are not locked in a reliable manner, are adjusted so as to give maximum radiation whilst maintaining an intelligible picture for 1 h, at the end of which the measurement is made.	
	NOTE Z1 Soldered joints and paint lockings are examples of adequate locking.	
	The dose-rate is determined by means of a radiation monitor with an effective area of 10 cm², at any point 10 cm from the outer surface of the apparatus.
