

## TEST REPORT UL 60335-1 Safety of household and similar electrical appliances

| Report Number:   | AOC250604001S   |
|--|---|
| Date of issue:   | 2025-06-04  |
| Total number of pages:   | 115   |
| Name of Testing Laboratory   | Shenzhen AOCE Electronic Technology Service Co., Ltd  |
| preparing the Report   | Room 202, 2nd Floor, No.12th Building of Xinhe Tongfuyu Industrial Park, Fuhai Street, Baoan District, Shenzhen, Guangdong, China |
| Applicant's name:  | Shenzhen Qianhe Technology Co., Ltd   |
| Address:   | 208, Building G, No. 62 Puxia Road, Liuyue North Community,<br>Henggang Street, Longgang District, Shenzhen                       |
| Test specification:  |   |
| Standard:  | ☑ UL 60335-1, Edition 6   |
| Test procedure:  | Test report   |
| Non-standard test method:  | N/A   |
| Test Report Form No  | IEC 60335_1X  |
| Test Report Form(s) Originator:  | Nemko AS  |
| Master TRF:  | Dated 2016-10   |
| Copyright © 2016 IEC System of Cor<br>and Components (IECEE System). A | nformity Assessment Schemes for Electrotechnical Equipment<br>Il rights reserved.   |

#### IEC 60335-1

| Clause R | Requirement + Test | Result - Remark | Verdict |
|----------|--------------------|-----------------|---------|

|         | If a conductor of a printed board becomes open-circuited, the appliance is considered to have withstood the particular test, provided both of the following conditions are met:                              | N/A |
|---------|--|-----|
|         | - the base material of the printed circuit board withstands the test of Annex E  | N/A |
|         | - any loosened conductor does not reduce clearance<br>or creepage distances between live parts and<br>accessible metal parts below the values specified in<br>clause 29                                      | N/A |
| 19.11.1 | Fault conditions a) to g) in 19.11.2 are not applied to circuits or parts of circuits meeting both of the following conditions:  | N/A |
|         | - the electronic circuit is a low-power circuit, that is,<br>the maximum power at low-power points does not<br>exceed 15 W according to the tests specified  | N/A |
|         | - the protection against electric shock, fire hazard,<br>mechanical hazard or dangerous malfunction of<br>other parts of the appliance does not rely on the<br>correct functioning of the electronic circuit | N/A |
| 19.11.2 | Fault conditions applied one at a time, the appliance operating under conditions specified in clause 11, but supplied at rated voltage, duration of the tests as specified:                                  | N/A |
|         | a) short circuit of functional insulation if clearances<br>or creepage distances are less than the values<br>specified in clause 29  | N/A |
|         | b) open circuit at the terminals of any component  | N/A |
|         | c) short circuit of capacitors, unless   | N/A |
|         | they comply with IEC 60384-14  | N/A |
|         | d) short circuit of any two terminals of an electronic component, other than integrated circuits   | N/A |
|         | This fault condition is not applied between the two circuits of an optocoupler   | N/A |
|         | e) failure of triacs in the diode mode   | N/A |
|         | f) failure of microprocessors and integrated circuits  | N/A |
|         | g) failure of an electronic power switching device   | N/A |
|         | Each low power circuit is short-circuited by<br>connecting the low-power point to the pole of the<br>supply source from which the measurements were<br>made  | N/A |

|-----------|--|----------------------|---------|
| Clause    | Requirement + Test   | Result - Remark      | Verdict |
| 19.11.4.6 | Appliances having a rated current not exceeding 16<br>A are subjected to the Class 3 voltage dips and<br>interruptions in accordance with IEC 61000-4-11   |                      | N/A     |
|           | Appliances having a rated current exceeding 16 A are subjected to the Class 3 voltage dips and interruptions in accordance with IEC 61000-4-34   |                      | N/A     |
| 19.11.4.7 | The appliance is subjected to mains signals in accordance with IEC 61000-4-13, test level class 2  |                      | N/A     |
| 19.11.4.8 | The appliance is supplied at rated voltage and<br>operated under normal operation. After 60s the<br>power supply is reduced to a level such that the<br>appliance ceases to respond or parts controlled by<br>the programmable component cease to operate  |                      | N/A     |
|           | The appliance continues to operate normally, or  |                      | N/A     |
|           | requires a manual operation to restart   |                      | N/A     |
| 19.12     | If the safety of the appliance for any of the fault<br>conditions specified in 19.11.2 depends on the<br>operation of a miniature fuse-link complying with<br>IEC 60127, the test is repeated, measuring the<br>current flowing through the fuse-link; measured<br>current (A); rated current of the fuse-link (A) : |                      | P       |
| 19.13     | During the tests the appliance does not emit flames,<br>molten metal, poisonous or ignitable gas in<br>hazardous amounts   |                      | Р       |
|           | Temperature rises not exceeding the values shown in table 9  | (see appended table) | Р       |
|           | Compliance with clause 8 not impaired  |                      | Р       |
|           | If the appliance can still be operated it complies with 20.2   |                      | N/A     |
|           | Insulation, other than of class III appliances or class I contain live parts, withstands the electric strength test specified in table 4:  |                      | Р       |
|           | - basic insulation (V)   | 1000                 | Р       |
|           | - supplementary insulation (V)   |                      | N/A     |
|           | - reinforced insulation (V)  |                      | N/A     |
|           | After operation or interruption of a control,<br>clearances and creepage distances across the<br>functional insulation withstand the electric strength<br>test of 16.3, the test voltage being twice the working<br>voltage  |                      | Р       |

Report No. AOC250604001S

#### IEC 60335-1

Clause Requirement + Test

Result - Remark

Verdict

| 29   | CLEARANCES, CREEPAGE DISTANCES AND SO   | LID INSULATION       | P   |
|------|---|----------------------|-----|
|      | Clearances, creepage distances and solid insulation withstand electrical stress   |                      | Р   |
|      | For coatings used on printed circuits boards to<br>protect the microenvironment (Type 1) or to provide<br>basic insulation (Type 2), Annex J applies  |                      | N/A |
|      | The microenvironment is pollution degree 1 under type 1 protection  |                      | N/A |
|      | For type 2 protection, the spacing between the conductors before the protection is applied is not less than the values specified in Table 1 of IEC 60664-3  |                      | P   |
|      | These values apply to functional, basic, supplementary and reinforced insulation:   |                      | Р   |
| 29.1 | Clearances not less than the values specified in table 16, taking into account the rated impulse voltage for the overvoltage categories of table 15, unless   | (see appended table) | P   |
|      | for basic insulation and functional insulation they comply with the impulse voltage test of clause 14   |                      | N/A |
|      | However, if the distances are affected by wear,<br>distortion, movement of the parts or during<br>assembly, the clearances for rated impulse voltages<br>of 1500V and above are increased by 0,5 mm and<br>the impulse voltage test is not applicable |                      | Ρ   |
|      | For appliances intended for use at altitudes<br>exceeding 2 000 m, the clearances in Table 16 is<br>increased according to the relevant multiplier values<br>in Table A.2 of IEC 60664-1  |                      | N/A |
|      | Impulse voltage test is not applicable:   |                      | Р   |
|      | - when the microenvironment is pollution degree 3, or   |                      | N/A |
|      | - for basic insulation of class 0 and class 01 appliances, or   |                      | N/A |
|      | - to appliances intended for use at altitudes exceeding 2 000 m   |                      | N/A |
|      | Appliances are in overvoltage category II   |                      | Р   |
|      | A force of 2 N is applied to bare conductors, other than heating elements   |                      | Р   |
|      | A force of 30 N is applied to accessible surfaces   |                      | Р   |

| 29.1.1      | Clearances of basic insulation withstand the overvoltages, taking into account the rated impulse voltage   |                      | N/A     |
|             | The values of table 16 or the impulse voltage test of clause 14 are applicable   | (see appended table) | N/A     |
|             | Clearance at the terminals of tubular sheathed<br>heating elements may be reduced to 1,0 mm if the<br>microenvironment is pollution degree 1   |                      | N/A     |
|             | Lacquered conductors of windings considered to be bare conductors  |                      | N/A     |
| 29.1.2      | Clearances of supplementary insulation not less than those specified for basic insulation in table 16:   | (see appended table) | Р       |
| 29.1.3      | Clearances of reinforced insulation not less than<br>those specified for basic insulation in table 16, using<br>the next higher step for rated impulse voltage:  | (see appended table) | Р       |
|             | For double insulation, with no intermediate<br>conductive part between basic and supplementary<br>insulation, clearances are measured between live<br>parts and the accessible surface, and the insulation<br>system is treated as reinforced insulation |                      | N/A     |
| 29.1.4      | Clearances for functional insulation are the largest values determined from:   |                      | N/A     |
|             | - table 16 based on the rated impulse voltage:   | (see appended table) | N/A     |
|             | - table F.7a in IEC 60664-1, frequency not exceeding 30 kHz  |                      | N/A     |
|             | - clause 4 of IEC 60664-4, frequency exceeding 30 kHz  |                      | N/A     |
|             | If values of table 16 are largest, the impulse voltage test of clause 14 may be applied instead, unless  |                      | N/A     |
|             | the microenvironment is pollution degree 3, or   |                      | N/A     |
|             | the distances can be affected by wear, distortion, movement of the parts or during assembly  |                      | N/A     |
|             | However, clearances are not specified if the appliance complies with clause 19 with the functional insulation short-circuited  |                      | N/A     |
|             | Lacquered conductors of windings considered to be bare conductors  |                      | N/A     |
|             | However, clearances at crossover points are not measured   |                      | N/A     |
|             | Clearance between surfaces of PTC heating<br>elements may be reduced to 1mm  |                      | N/A     |

## IEC 60335-1

| IEC 60335-1 |   |                                 |         |
|-------------|---|---------------------------------|---------|
| Clause      | Requirement + Test  | Result - Remark                 | Verdict |
| 29.1.5      | Appliances having higher working voltages than rated insulation are the largest values determined from:   | l voltage, clearances for basic | N/A     |
|             | - table 16 based on the rated impulse voltage:  |                                 | N/A     |
|             | - table F.7a in IEC 60664-1, frequency not exceeding 30 kHz   |                                 | N/A     |
|             | - clause 4 of IEC 60664-4, frequency exceeding 30 kHz   |                                 | N/A     |
|             | If clearances for basic insulation are selected from<br>Table F.7a of IEC 60664-1 or Clause 4 of IEC<br>60664-4, the clearances of supplementary insulation<br>are not less than those specified for basic insulation   |                                 | N/A     |
|             | If clearances for basic insulation are selected from<br>Table F.7a of IEC 60664-1, the clearances of<br>reinforced insulation dimensioned as specified in<br>Table F.7a are to withstand 160% of the withstand<br>voltage required for basic insulation   |                                 | N/A     |
|             | If clearances for basic insulation are selected from<br>Clause 4 of IEC 60664-4, the clearances of<br>reinforced insulation are twice the value required for<br>basic insulation  |                                 | N/A     |
|             | If the secondary winding of a step-down transformer<br>is earthed, or if there is an earthed screen between<br>the primary and secondary windings, clearances of<br>basic insulation on the secondary side not less than<br>those specified in table 16, but using the next lower<br>step for rated impulse voltage |                                 | N/A     |
|             | Circuits supplied with a voltage lower than rated voltage, clearances of functional insulation are based on the working voltage used as the rated voltage in table 15   |                                 | N/A     |
| 29.2        | Creepage distances not less than those appropriate<br>for the working voltage, taking into account the<br>material group and the pollution degree   | (see appended table)            | Р       |
|             | Pollution degree 2 applies, unless  |                                 | Р       |
|             | - precautions taken to protect the insulation; pollution degree 1   |                                 | N/A     |
|             | - insulation subjected to conductive pollution; pollution degree 3  |                                 | N/A     |
|             | A force of 2 N is applied to bare conductors, other than heating elements   |                                 | Р       |
|             | A force of 30 N is applied to accessible surfaces   |                                 | Р       |

Report No. AOC250604001S

|        | IEC 60335-1   |                      |         |  |
|--------|---|----------------------|---------|--|
| Clause | Requirement + Test  | Result - Remark      | Verdict |  |
|        | In a double insulation system, the working voltage<br>for both the basic and supplementary insulation is<br>taken as the working voltage across the complete<br>double insulation system  |                      | N/A     |  |
| 29.2.1 | Creepage distances of basic insulation not less than specified in table 17  | (see appended table) | Р       |  |
|        | However, if the working voltage is periodic and has<br>a frequency exceeding 30 kHz, the creepage<br>distances are also determined from table 2 of IEC<br>60664-4, these values being used if exceeding the<br>values in table 17 |                      | P       |  |
|        | Except for pollution degree 1, corresponding creepage distance not less than the minimum specified for the clearance in table 16, if the clearance has been checked according to the test of clause 14                            |                      | N/A     |  |
| 29.2.2 | Creepage distances of supplementary insulation at<br>least those specified for basic insulation in table 17,<br>or  | (see appended table) | Р       |  |
|        | Table 2 of IEC 60664-4, as applicable   |                      | N/A     |  |
| 29.2.3 | Creepage distances of reinforced insulation at least<br>double those specified for basic insulation in table<br>17, or  | (see appended table) | Р       |  |
|        | Table 2 of IEC 60664-4, as applicable   |                      | N/A     |  |
| 29.2.4 | Creepage distances of functional insulation not less than specified in table 18   | (see appended table) | N/A     |  |
|        | However, if the working voltage is periodic and has<br>a frequency exceeding 30 kHz, the creepage<br>distances are also determined from table 2 of IEC<br>60664-4, these values being used if exceeding the<br>values in table 18 |                      | N/A     |  |
|        | Creepage distances may be reduced if the appliance complies with clause 19 with the functional insulation short-circuited   |                      | N/A     |  |
| 29.3   | Supplementary and reinforced insulation have adequate thickness, or a sufficient number of layers, to withstand the electrical stresses   |                      | N/A     |  |
|        | Compliance checked:   |                      | N/A     |  |
|        | - by measurement, in accordance with 29.3.1, or   |                      | N/A     |  |
|        | - by an electric strength test in accordance with 29.3.2, or  |                      | N/A     |  |

NOTE A Stuck-at fault model denotes a fault model representing an open circuit or a non-varying signal level. A DC fault model denotes a stuck-at fault model incorporating short circuit between signal lines.

<sup>a)</sup> For fault/error assessment, some components are divided into their sub-functions.

<sup>b)</sup> For each sub-function in the table, the Table R.2 measure will cover the software fault/error.

<sup>c)</sup> Where more than one measure is given for a sub-function, these are alternatives.

<sup>d)</sup> To be divided as necessary by the manufacturer into sub-functions.

<sup>e)</sup> Table R.1 is applied according to the requirements of R.1 to R.2.2.9 inclusive.

| S       | ANNEX S (NORMATIVE)<br>BATTERY OPERATED APPLIANCES POWERED BY BATTERIES THAT ARE<br>NON-RECHARGEABLE OR NOT RECHARGED IN THE APPLIANCE                                       |     |  |
|---------|--|-----|--|
|         | The following modifications to this standard are<br>applicable for battery-operated appliances where the<br>batteries are either non-rechargeable (primary<br>batteries), or | N/A |  |
|         | rechargeable batteries (secondary batteries) that are not recharged in the appliance   | N/A |  |
| 5.8.1   | If the supply terminals for the connection of the battery have no indication of polarity, the more unfavourable polarity is applied  | N/A |  |
| 5.S.101 | Appliances intended for use with a battery box are<br>tested with the battery box supplied with the<br>appliance or with the battery box recommended in<br>the instructions  | N/A |  |

|         | In addition, the articulated probe of Figure 13DV shall be applied as described for test probe B (IEC 61032) when the product is:  |                 |         |
|         | a) A hand-held product, or a hand-held part of a product; or   |                 |         |
|         | b) Accessible to children while the product is operating.  |                 |         |
| 8.1.4DV | D2 Modification to replace second bullet in first paragraph to read as follows:  |                 |         |
|         | • for d.c., the voltage does not exceed 30 V;  |                 |         |
| 9       | Starting of motor-operated appliances  |                 | -       |
| 9DV     | DR Addition of 9DV.1 – 9DV.4:  |                 | -       |
| 9DV.1   | An appliance shall start and operate on a circuit<br>protected by a non-time delay fuse having a current<br>rating corresponding to the supply mains to which<br>the appliance would normally be connected.  |                 |         |
| 9DV.2   | The use of time delay fuses is acceptable for<br>STATIONARY APPLIANCES marked as indicated in Clause<br>7.17DV.  |                 |         |
| 9DV.3   | Compliance is checked by the test specified in 9DV.4   |                 |         |
| 9DV.4   | The appliance shall be capable of starting 3 times at<br>the conditions of Clause 11 at<br>the RATED VOLTAGE. The appliance shall start<br>under conditions representing the beginning of<br>NORMAL OPERATION and the beginning of the<br>normal operating cycle. The performance is<br>unacceptable if the fuse opens or an overload<br>protector provided as part of the appliance operates. |                 |         |
| 11      | Heating  |                 | -       |
| 11.1DV  | DC Modification to add to the compliance statement:  |                 | N/A     |
|         | In addition, the polymeric materials that enclose or<br>support LIVE PARTS shall not exceed their relative<br>thermal index determined in accordance with the<br>standards in Annex DVA.   |                 |         |
|         | Table 3DV DC Modification to revise Table 3:   |                 | Р       |
|         | Revise Table 3 as follows:   |                 |         |
|         | a) Change temperature rise for <sup>2</sup> Points where the insulation of the wires can   |                 |         |
|         | come into contact with parts of the terminal block or compartment for fixed  |                 |         |
|         | wiring, for a STATIONARY APPLIANCE not   |                 |         |

| Clause | Requirement + Test   | Result - Remark | Verdict |
|--------|--|-----------------|---------|
|        | Annex DVA as far as they reasonably apply.   |                 |         |
|        | 24.1DV.2 Compliance with the standard for the relevant component does not necessarily ensure compliance with the requirements of this standard.  |                 |         |
|        | 24.1DV.3 Motors are not required to comply with the standards specified in Annex DVA. They may be tested as part of the appliance according to this standard.  |                 |         |
|        | 24.1DV.4 Unless otherwise specified, the<br>requirements of Clause 29 of this standard apply<br>between LIVE PARTS of components and<br>ACCESSIBLE PARTS of the appliance. Unless<br>otherwise specified, components may comply with<br>the requirements for CLEARANCES and<br>CREEPAGE DISTANCES for FUNCTIONAL<br>INSULATION as specified in the relevant<br>component standard. |                 |         |
|        | 24.1DV.5 Unless otherwise specified, the requirements of 30.2 of this standard apply to parts of non-metallic material in components, including parts of non-metallic material supporting current-carrying connections inside components.  |                 |         |
|        | 24.1DV.6 Components that have not been<br>previously tested and shown to comply with the<br>standard for the relevant component shall be tested<br>according to the requirements of 30.2 of this<br>standard.  |                 |         |
|        | 24.1DV.7 Components that have been previously<br>tested and shown to comply with the resistance to<br>fire requirements in the standard for the relevant<br>component need not be retested, provided that  |                 |         |
|        | a) the severity specified in the component standard<br>is not less than the severity specified in 30.2 of this<br>standard; and  |                 |         |
|        | b) unless the pre-selection alternatives in 30.2 are used, the test report for the component states the values of te and ti, as required by IEC 60695-2-11.  |                 |         |
|        | 24.1DV.8 If the two conditions specified in 24.1DV.7 are not satisfied, the component shall be tested as part of the appliance.  |                 |         |
|        | NOTE There are two levels of severity specified for appliances for which 30.2.3 is applicable.   |                 |         |
|        | 24.1DV.9 Unless components have been previously tested and found to comply with the relevant standard of Annex DVA for the number of cycles specified, they shall be tested in accordance with 24.1.1 to 24.1.9. For components mentioned in   |                 |         |

### Attachment No.1

# IEC60335\_1X - ATTACHMENT

| Requirement + Test   | Result - Remark  | Verdict  |
|--|--|--|
| D2 Modification to add the following to the end of 30.2.2:   |  | N/A  |
| The glow-wire test is also not carried out on parts of material classified at least V-1 according to IEC 60695-11-10, or at least VTM-1 according to ISO 9773, provided that the test sample was no thicker than the relevant part of the appliance.   |  |  |
| D2 Modification to replace the third paragraph with the following:   |  | N/A  |
| However, the glow-wire test of IEC 60695-2-11 with<br>a test severity of 850 °C is not carried out on parts of<br>material classified at least V-1 according to IEC<br>60695-11-10, or at least VTM-1 according to ISO<br>9773, or as having a glow-wire flammability index of<br>at least 850 °C according to IEC 60695-2-12. |  |  |
| D2 Modification to replace the fourth paragraph with the following:  |  | N/A  |
| However, the glow-wire test with a test severity of 750°C or 650°C, as appropriate, is not carried out on parts of material classified at least V-1 according to IEC 60695-11-10, or at least VTM-1 according to ISO 9773, or fulfilling both or either of the following classifications:                                      |  |  |
| D2 Replace second dashed item of last paragraph with the following:  |  | N/A  |
| <ul> <li>parts comprising material classified as V-0 or V-1<br/>according to IEC 60695-11-10 or at least VTM-1<br/>according to ISO 9773, provided that the test<br/>sample used for the classification was no thicker<br/>than the relevant part of the appliance; or</li> </ul>  |  |  |
| D2 Modification to add the following note to Clause<br>30:<br>NOTE IEC and ISO references to flammability<br>designations are equivalent to the same   |  |  |
|  | D2 Modification to add the following to the end of<br>30.2.2:<br>The glow-wire test is also not carried out on parts of<br>material classified at least V-1 according to IEC<br>60695-11-10, or at least VTM-1 according to ISO<br>9773, provided that the test sample was no thicker<br>than the relevant part of the appliance.<br>D2 Modification to replace the third paragraph with<br>the following:<br>However, the glow-wire test of IEC 60695-2-11 with<br>a test severity of 850 °C is not carried out on parts of<br>material classified at least V-1 according to IEC<br>60695-11-10, or at least VTM-1 according to ISO<br>9773, or as having a glow-wire flammability index of<br>at least 850 °C according to IEC 60695-2-12.<br>D2 Modification to replace the fourth paragraph with<br>the following:<br>However, the glow-wire test with a test severity of<br>750°C or 650°C, as appropriate, is not carried out<br>on parts of material classified at least V-1 according<br>to IEC 60695-11-10, or at least VTM-1 according to<br>ISO 9773, or fulfilling both or either of the following<br>classifications:<br>D2 Replace second dashed item of last paragraph<br>with the following:<br>- parts comprising material classified as V-0 or V-1<br>according to IEC 60695-11-10 or at least VTM-1<br>according to ISO 9773, provided that the test<br>sample used for the classification was no thicker<br>than the relevant part of the appliance; or<br>D2 Modification to add the following note to Clause<br>30:<br>NOTE IEC and ISO references to flammability | D2 Modification to add the following to the end of 30.2.2:         The glow-wire test is also not carried out on parts of material classified at least V-1 according to ISC 60695-11-10, or at least VTM-1 according to ISO 9773, provided that the test sample was no thicker than the relevant part of the appliance.         D2 Modification to replace the third paragraph with the following:         However, the glow-wire test of IEC 60695-2-11 with a test severity of 850 °C is not carried out on parts of material classified at least V-1 according to ISC 60695-11-10, or at least VTM-1 according to ISC 9773, or as having a glow-wire flammability index of at least 850 °C according to IEC 60695-2-12.         D2 Modification to replace the fourth paragraph with the following:         However, the glow-wire test with a test severity of 750°C or 650°C, as appropriate, is not carried out on parts of material classified at least V-1 according to ISC 09773, or ulfilling both or either of the following classifications:         D2 Replace second dashed item of last paragraph with the following:         - parts comprising material classified as V-0 or V-1 according to ISC 09773, provided that the test sample used for the classification was no thicker than the relevant part of the appliance; or         D2 Rodification to add the following note to Clause 30:         NOTE IEC and ISO references to flammability designations are equivalent to the same |

| Annex A | Routine tests  | -   |
|---------|--|-----|
| A.1DV   | D2 Modification to add the following to A.1:<br>As an alternative to the test method specified,<br>grounding continuity may be determined by any<br>suitable indicating device, such as an ohmmeter, a<br>battery and buzzer combination, or the like. | N/A |

Verdict

#### Attachment No.1

# IEC60335\_1X - ATTACHMENT

| Clause | Requirement + Test | Result - Remark |
|--------|--------------------|-----------------|
|--------|--------------------|-----------------|

| Annex R      | Software evaluation   | -   |
|--------------|---|-----|
| RDV          | D2 Modification to add the following note after the first paragraph:  | N/A |
|              | NOTE All references to IEC 60730-1 are replaced<br>by the Software standards of Annex DVA.  |     |
| Annex<br>DVA | North American additional requirements  | -   |
| Annex DVA    | DC Add Annex DVA as follows:  |     |
| DVA.1        | DC Addition:  | N/A |
|              | DVA.1.1 The following are North American<br>standards that replace referenced IEC standards<br>where applicable and provide additional<br>requirements. The applicable requirements of the<br>subject standards (first column of Table DVA.1)<br>apply as specified the appliance standard. For dated<br>references, only the edition cited applies. For<br>undated references, the latest edition of the<br>referenced document (including any amendments)<br>applies. |     |
| Annex<br>DVC | Mechanical requirements for direct plug in appliances   | -   |
| Annex        | DC Add Annex DVC as follows:  | N/A |
| DVC          | DVC.1 Maximum tipping moment  |     |
|              | DVC.1.1 A device shall comply with the maximum tipping moment requirement specified in DVC.1.2, Table DVC.1, and Figure DVC.1.  |     |
|              | DVC.1.2 The limits specified in Table DVC.1 shall be determined as follows:   |     |
|              | a) A directly-mounted accessory shall be in place;<br>and   |     |
|              | b) A removable part shall be in place.  |     |
| Annex<br>DVD | Adequacy of adhesive bonding properties   | -   |
| Annex<br>DVD | D2 Add Annex DVD as follows (Canada only):  | N/A |
| DVD.1        | A sample of the appliance or part shall be evaluated<br>with the sample placed with the adhesive secured<br>part(s) on the underside.   | N/A |

## Report No. AOC250604001S

#### Attachment No.1

IEC60335\_1X - ATTACHMENT

| Clause | Requirement + Test   | Result - Remark | Verdict |
|--------|--|-----------------|---------|
| DVD.2  | Condition the sample in an oven at one of the<br>following temperatures for the time durations<br>specified:<br>a) 100°C± 2°C for one week;<br>b) 90°C± 2°C for three weeks; or<br>c) 82°C± 2°C for eight weeks  |                 | N/A     |
| DVD.3  | <ul> <li>Upon completion of the temperature conditioning:</li> <li>a) Remove the sample from oven and leave it at any convenient temperature between 20°C and 30°C for 1 h.</li> <li>b) Place the sample in a freezer at -40°C± 2°C for 4h.</li> <li>c) Remove and allow the sample to come to any convenient temperature between 20°C and 30°C for 8 h.</li> <li>d) Place the sample in a cabinet at 91% to 95% relative humidity for 72 h.</li> <li>e) Remove the sample and leave it at any convenient temperature between 20°C and 30°C for 1 h.</li> <li>f) Place the sample in an oven at the temperature used for the temperature conditioning for 4h.</li> <li>g) Remove the sample and allow it to reach any convenient temperature between 20°C and 30°C for 8 hrs.</li> </ul> |                 | N/A     |
| DVD.4  | <ul> <li>The sample shall then be immediately subjected to the following tests:</li> <li>a) For NON-DETACHABLE PARTS, the force and torque tests of 22.11 and the impact test of Clause 21. The NON-DETACHABLE PART shall not fall off or partly dislodge as a result of these tests.</li> <li>b) For other parts, a pull force of 2N without separating the adhesive bond.</li> </ul>   |                 |         |
| DVD.5  | With the concurrence of the manufacturer, any of the above time durations may be increased as specified in DVD.2 or DVD.3.   |                 |         |
| DVD.6  | Additional testing might need to be conducted if the ENCLOSURE is exposed to oils and solvents during NORMAL OPERATION.  |                 |         |
