# 1. SUMMARY OF STANDARDS AND RESULTS

## 1.1. Description of Standards and Results

The EUT have been tested according to the applicable standards as referenced below.

| EMISSION (EN IEC 55014-1: 2021)                   |                                               |                      |         |
|---------------------------------------------------|-----------------------------------------------|----------------------|---------|
| Description of Test Item                          | Standard                                      | Limits               | Results |
| Conducted disturbance at mains terminals          | EN IEC 55014-1: 2021                          | -----                | PASS    |
| Clicks measurement                                | EN IEC 55014-1: 2021                          | -----                | PASS    |
| Disturbance Power                                 | EN IEC 55014-1: 2021                          | -----                | PASS    |
| Radiated disturbance                              | EN IEC 55014-1: 2021                          | -----                | N/A     |
| Harmonic current emissions                        | EN IEC 61000-3-2: 2019+A1: 2021+A2: 2024      | Class A              | PASS    |
| Voltage fluctuations & flicker                    | EN 61000-3-3: 2013+A1: 2019+A2: 2021+AC: 2022 | -----                | PASS    |
| IMMUNITY (EN IEC 55014-2: 2021)                   |                                               |                      |         |
| Description of Test Item                          | Basic Standard                                | Performance Criteria | Results |
| Electrostatic discharge (ESD)                     | EN 61000-4-2: 2009                            | B                    | PASS    |
| Radio-frequency, Continuous radiated disturbance  | EN 61000-4-3: 2020                            | A                    | N/A     |
| Electrical fast transient (EFT)                   | EN 61000-4-4: 2012                            | B                    | PASS    |
| Surge (Input a.c. power ports)                    | EN 61000-4-5: 2014+A1: 2017                   | B                    | PASS    |
| Radio-frequency, Continuous conducted disturbance | EN 61000-4-6: 2014                            | A                    | PASS    |
| Power frequency magnetic field                    | EN 61000-4-8: 2010                            | A                    | N/A     |

|--------|------------------|--------|

## 1.2. Description of Performance Criteria

### General Performance Criteria

Examples of functions defined by the manufacturer to be evaluated during testing include, but are not limited to, the following:

- essential operational modes and states;
- tests of all peripheral access (hard disks, floppy disks, printers, keyboard, mouse, etc.);
- quality of software execution;
- quality of data display and transmission;
- quality of speech transmission.

#### 1.2.1. Performance criterion A

The equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacture when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be deliver from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

#### 1.2.2. Performance criterion B

After the test, the equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacture, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance.

During the test, degradation of performance is allowed. However, no change of operation state or stored data is allowed to persist after the test.

If the minimum performance level (or the permissible performance loss) is not specified by the manufacturer, then either of these may be deliver from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

#### 1.2.3. Performance criterion C

Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacture's instructions.

Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be loss.

## 2. GENERAL INFORMATION

### 2.1. Description of Device (EUT)

EUT : INSTANT ELECTRIC WATER HEATER

Trade Mark : N/A

Test Model : LF-008C

Power Supply : 220-240V, 50-60Hz, 6000W

### 2.2. Test Facility

EMC Lab. :

### 2.3. Statement of the Measurement Uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. To CISPR 16 – 4 “Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements” and is documented in the AOCE quality system acc. To DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

## 2.4.Measurement Uncertainty

| EMF                                           |                                                         | $\pm 21.59\%$                  | N/A                          |

- (1) Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus.
- (2) The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor of  $k=2$ , which for a normal distribution corresponds to a coverage probability of approximately 95%.

### 3. MEASURING DEVICES AND TEST EQUIPMENT

#### 3.1. Conducted Disturbance

| Item | Test Equipment    | Manufacturer | Model No.   | Serial No.          | Last Cal.  |

## 4. TEST RESULTS

### 4.1. Power Line Conducted Emission Measurement

#### 4.1.1. Block Diagram of Test Setup

#### 4.1.2. Power Line Conducted Emission Limits

| Frequency<br>(MHz) | Limit (dB $\mu$ V) |               |
|--------------------|--------------------|---------------|
|                    | Quasi-peak Level   | Average Level |
| 0.15 ~ 0.50        | 66.0 ~ 56.0 *      | 59.0 ~ 46.0 * |
| 0.50 ~ 5.00        | 56.0               | 46.0          |
| 5.00 ~ 30.00       | 60.0               | 50.0          |

Remark: \* means decreasing linearly with logarithm of frequency.

#### 4.1.3. EUT Configuration on Test

The following equipments are installed on Conducted Emission Measurement to meet EN IEC 55014-1 requirements and operating in a manner which tends to maximize its emission characteristics in a normal application.

#### 4.1.4. Operating Condition of EUT

4.1.4.1. Setup the EUT as shown on Section 4.1.1.

4.1.4.2. Turn on the power of all equipments.

4.1.4.3. Let the EUT work in measuring Mode 1 and measure it.

#### 4.1.5. Test Procedure

The EUT is put on the plane 0.8m high above the ground by insulating support and connected to the AC mains through a Line Impedance Stability Network (L.I.S.N). This provided a 50ohm coupling impedance for the tested equipments. Both sides of AC line are investigated to find out the maximum conducted emission according to the EN IEC 55014-1 regulations during conducted emission measurement.

The bandwidth of the field strength meter is set at 9kHz.

The frequency range from 150kHz to 30MHz is investigated. The scanning waveform please refer to the next page.

#### 4.1.6. Test Results

**PASS.**

The frequency range 150kHz to 30MHz is investigated.

## 4.2. Clicks Measurement

### 4.2.1. Block Diagram of Test Setup

Test Receiver

#### 4.2.2. Clicks Measurement Standard and limit

##### 4.2.2.1. Test Standard

EN IEC 55014-1: 2021

##### 4.2.2.2. Test Limit

According to standard EN IEC 55014-1, if click rate (N) less 5/min and the time of this discontinuous disturbances does not exceed 10ms, then the limit value are omitted.

#### 4.2.3. EUT Configuration on Test

The configuration of EUT is same as Section 4.2.1.

#### 4.2.4. Operating Condition of EUT

4.2.4.1. Setup the EUT as shown Section 4.2.1.

4.2.4.2. Turn on the power of all equipments.

4.2.4.3. After that, let EUT work in test Mode 1 and measure it.

#### 4.2.5. Test Procedure

This test is done when switch operations in thermostatically controlled appliances, automatic program controlled machines and other electrically controlled or operated appliances may generate discontinuous disturbance (Click). The measurement of disturbance shall be performed at the following restricted number of frequencies: 150kHz, 500kHz, 1.4MHz and 30MHz. At each frequency, for appliances which stop automatically, duration of the minimum number of complete programs necessary to produce 40 counted clicks or, where relevant, 40 counted clicks have not been produced, the test is stopped at the end of the program in course. The relevant click rate N. The appliance under test shall be deemed to comply with the limit if not more than a quarter of the number of the counted click registered during the observation time.

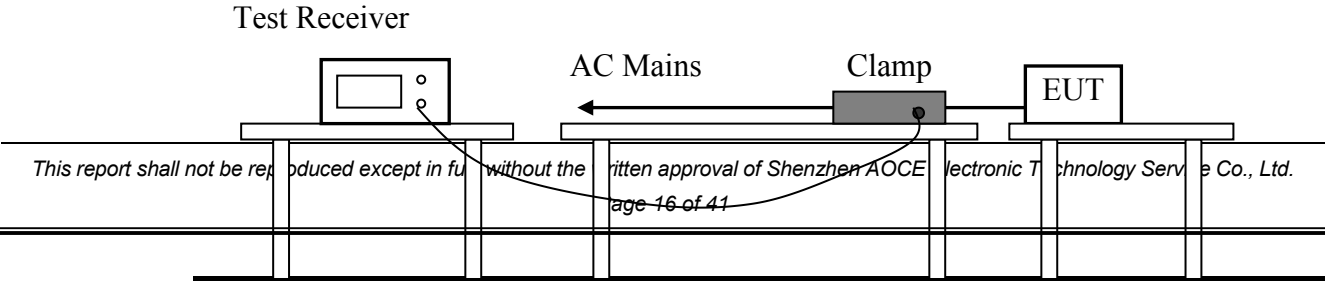

#### 4.2.6. Test Results

PASS.

The click rate ( $N=1/2.1=0.48<5$ ) of the EUT is less than 5/min and the time of this discontinuous disturbances ( $\Delta T=4\text{ms}<10\text{ms}$ ) does not exceed 10ms. According to EN IEC 55014-1, the limit values are omitted.

4.3. Disturbance Power Measurement

4.3.1. Block Diagram of Test Setup

#### 4.3.2. Test Standard

EN IEC 55014-1: 2021

#### 4.3.3. Disturbance Power Limits

All emanations from devices or system including any network of conductors and apparatus connected there to, shall not exceed the level of field strengths specified below:

| Frequency<br>MHz | Limits dB(pW)                                  |                                                |
|------------------|------------------------------------------------|------------------------------------------------|
|                  | Quasi-peak Value                               | Average Value                                  |
| 30 ~ 300         | 45 Increasing Linearly<br>with Frequency to 55 | 35 Increasing Linearly<br>with Frequency to 45 |

| Household and similar appliances                                                                                                               |                       |                    | Tools                                 |                    |                                                        |                    |                                |                    |

| NOTE 1 This table only applies if specified in 4.1.2.3.2.                                                                                      |                       |                    |                                       |                    |                                                        |                    |                                |                    |
| NOTE 2 The measured result at a particular frequency shall be less than the relevant limit minus the corresponding margin (at that frequency). |                       |                    |                                       |                    |                                                        |                    |                                |                    |

#### 4.3.4. EUT Configuration on Test

The EN IEC 55014-1 Regulations test method must be used to find the maximum emission during radiated emission measurement. The configuration of the EUT is the same as used in conducted emission measurement.

#### 4.3.5. Operating Condition of EUT

Same as conducted emission measurement, which is listed in Section 4.1.1 except the test set up replaced as Section 4.3.1.

#### 4.3.6. Test Procedure

The EUT is placed on the plane 0.8m high above the ground by insulating support and away from other metallic surface at least 0.4m. It is connected to the power mains through an extension cord of 6m min. The absorber clamp clamps the cord and moves from the far end to the EUT to measure the disturbing energy emitted from the cord.

The bandwidth of the field strength meter is set at 120kHz.  
All the test results are listed in Section 4.3.7.

#### 4.3.7. Test Results

PASS.

The frequency spectrum from 30 MHz to 300 MHz is investigated.

## 4.4. Harmonic Current Emission Measurement

### 4.4.1. Block Diagram of Test Setup

### 4.4.2. Test Standard

EN IEC 61000-3-2: 2019+A1: 2021+A2: 2024, Class A

### 4.4.3. Operation Condition of EUT

Same as Section 4.1.4 except the test setup replaced as Section 4.4.1.

### 4.4.4. Test Results

**PASS**

#### 4.5.1. Block Diagram of Test Setup

EN 61000-3-3: 2013+A1: 2019+A2: 2021+AC: 2022

#### 4.5.3.1. Setup the EUT as shown Section 4.5.1.

#### 4.5.3.2. Turn on the power of all equipments.

#### 4.5.3.3. Let EUT work in test mode (On/Off) and measure it.

**PASS.**

#### 4.6.3.2. Performance criterion: **B**

### 4.6.4. EUT Configuration on Test

The configuration of EUT are listed in Section 4.6.1.

### 4.6.5. Operating Condition of EUT

Same as conducted emission measurement, which is listed in Section 4.1.4, except the test set up replaced by Section 4.6.1.

### 4.6.6. Test Procedure

#### 4.6.6.1. Air Discharge

This test is done on a non-conductive surface. The round discharge tip of the discharge electrode shall be approached as fast as possible to touch the EUT. After each discharge, the discharge electrode shall be removed from the EUT. The generator is then re-triggered for a new single discharge and repeated 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed.

#### 4.6.6.2. Contact Discharge

All the procedure shall be same as Section 4.6.6.1. except that the tip of the discharge electrode shall touch the EUT before the discharge switch is operated.

#### 4.6.6.3. Indirect Discharge For Horizontal Coupling Plane

At least 10 single discharges (in the most sensitive polarity) shall be applied at the front edge of each HCP opposite the center point of each unit (if applicable) of the EUT and 0.1m from the front of the EUT. The long axis of the discharge electrode shall be in the plane of the HCP and perpendicular to its front edge during the discharge.

#### 4.6.6.4. Indirect Discharge For Vertical Coupling Plane

At least 10 single discharges (in the most sensitive polarity) shall be applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X 0.5m, is placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges shall be applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated.

#### 4.6.7. Test Results

**PASS.**

## 4.7. Electrical Fast Transient/Burst Immunity Test

### 4.7.1. Block Diagram of Test Setup

### 4.7.2. Test Standard

EN IEC 55014-2: 2021 (EN 61000-4-4: 2012, Severity Level: Level 2: 1KV)

### 4.7.3. Severity Levels and Performance Criterion

#### 4.7.3.1. Severity level

| Open Circuit Output Test Voltage $\pm 10\%$ |                       |                                                     |
|---------------------------------------------|-----------------------|-----------------------------------------------------|
| Level                                       | On Power Supply Lines | On I/O (Input/Output) Signal data and control lines |
| 1.                                          | 0.50KV                | 0.25KV                                              |
| 2.                                          | 1.00KV                | 0.50KV                                              |
| 3.                                          | 2.00KV                | 1.00KV                                              |
| 4.                                          | 4.00KV                | 2.00KV                                              |
| X                                           | Special               | Special                                             |

#### 4.7.3.2. Performance criterion: **B**

### 4.7.4. EUT Configuration on Test

The configuration of EUT are listed in Section 4.7.1.

### 4.7.5. Operating Condition of EUT

4.7.5.1. Setup the EUT as shown in Section 4.7.1.

4.7.5.2. Turn on the power of all equipments.

4.7.5.3. Let the EUT work in test Mode 1 and measure it.

### 4.7.6. Test Procedure

The EUT is put on the table which is 0.8 meter high above the ground. This reference ground plane shall project beyond the EUT by at least 0.1m on all sides and the minimum distance between EUT and all other conductive structure, except the ground plane beneath the EUT, shall be more than 0.5m.

## 4.7.6.1.For input and output AC power ports:

The EUT is connected to the power mains by using a coupling device which couples the EFT interference signal to AC power lines. Both polarities of the test voltage should be applied during compliance test and the duration of the test is 2 mins.

## 4.7.6.2.For signal lines and control lines ports:

No I/O ports. It's unnecessary to test.

## 4.7.6.3.For DC output line ports:

No DC output ports. It's unnecessary to test.

## 4.7.7.Test Results

**PASS.**

## 4.8. Surge Immunity Test

### 4.8.1. Block Diagram of Test Setup

### 4.8.2. Test Standard

EN IEC 55014-2: 2021

(EN 61000-4-5: 2014+A1 : 2017, Severity Level: Level 2, Line to Line: 1.0KV; Level 3: Line to Ground: 2.0KV)

### 4.8.3. Severity Levels and Performance Criterion

#### 4.8.3.1. Severity level

| Severity Level | Open-Circuit Test Voltage (KV) |
|----------------|--------------------------------|
| 1              | 0.5                            |
| 2              | 1.0                            |
| 3              | 2.0                            |
| 4              | 4.0                            |
| X              | Special                        |
|                |                                |

#### 4.8.3.2. Performance criterion: **B**

### 4.8.4. EUT Configuration on Test

The configuration of EUT are listed in Section 4.8.1.

### 4.8.5. Operating Condition of EUT

4.8.5.1. Setup the EUT as shown in Section 4.8.1.

4.8.5.2. Turn on the power of all equipments.

4.8.5.3. Let the EUT work in test Mode 1 and measure it.

### 4.8.6. Test Procedure

4.8.6.1. Set up the EUT and test generator as shown on Section 4.8.1.

4.8.6.2. For line to line coupling mode, provide a 1.0 KV 1.2/50us voltage surge (at open-circuit condition) and 8/20us current surge to EUT selected points.

4.8.6.3. At least 5 positive and 5 negative (polarity) tests with a maximum 1/min repetition rate are conducted during test

4.8.6.4. Different phase angles are done individually.

4.8.6.5. Record the EUT operating situation during compliance test and decide the EUT immunity criterion for above each test.

#### 4.8.7. Test Results

**PASS.**

#### 4.9.3.2. Performance criterion: **A**

### 4.9.4. EUT Configuration on Test

The configuration of EUT are listed in Section 4.9.1.

### 4.9.5. Operating Condition of EUT

4.9.5.1. Setup the EUT as shown in Section 4.9.1.

4.9.5.2. Turn on the power of all equipments.

4.9.5.3. Let the EUT work in test Mode 1 and measure it.

#### 4.9.6. Test Procedure

4.9.6.1. Set up the EUT, CDN and test generators as shown on Section 4.9.1.

4.9.6.2. Let the EUT work in test mode and measure it.

4.9.6.3. The EUT are placed on an insulating support 0.1m high above a ground reference plane. CDN (coupling and decoupling device) is placed on the ground plane about 0.3m from EUT. Cables between CDN and EUT are as short as possible, and their height above the ground reference plane shall be between 30 and 50 mm (where possible).

4.9.6.4. The disturbance signal described below is injected to EUT through CDN.

4.9.6.5. The EUT operates within its operational mode(s) under intended climatic conditions after power on.

4.9.6.6. The frequency range is swept from 150kHz to 230MHz using 3V signal level, and with the disturbance signal 80% amplitude modulated with a 1kHz sine wave.

4.9.6.7. The rate of sweep shall not exceed  $1.5 \times 10^{-3}$  decades/s. Where the frequency is swept incrementally, the step size shall not exceed 1% of the start and thereafter 1% of the preceding frequency value.

4.9.6.8. Recording the EUT operating situation during compliance testing and decide the EUT immunity criterion.

#### 4.9.7. Test Results

**PASS.**

Note:

## 5. RADIATED EMISSION MEASUREMENT

### 5.1. Block Diagram of Test Setup

### 5.2. Measuring Standard

EN IEC 55014-1:2017+A11:2020

### 5.3. Radiated Emission Limits

EN 55032: 2015 Limits:

All emanations from a class B device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified below:

| FREQUENCY<br>(MHz) | DISTANCE<br>(Meters) | FIELD STRENGTHS LIMIT<br>(dB $\mu$ V/m) |
|--------------------|----------------------|-----------------------------------------|
| 30 ~ 230           | 3                    | 40                                      |
| 230 ~ 1000         | 3                    | 47                                      |

Note:

1. The smaller limit shall apply at the combination point between two frequency bands.
2. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the EUT.

#### 5.4.EUT Configuration on Test

The EN 55032 regulations test method must be used to find the maximum emission during radiated emission measurement.

#### 5.5.Operating Condition of EUT

4.5.1 Turn on the power.

4.5.2 After that, let the EUT work in test mode (ON) and measure it.

#### 5.6.Test Procedure

The EUT is placed on a turntable, which is 0.8 meter high above the ground. The turntable can rotate 360 degrees to determine the position of the maximum emission level. The EUT is set 3 meters away from the receiving antenna, which is mounted on a antenna tower. The antenna can be moved up and down from 1 to 4 meters to find out the maximum emission level. By-log antenna is used as a receiving antenna. Both horizontal and vertical polarization of the antenna is set on test.

The bandwidth of the Receiver is set at 120kHz.

The frequency range from 30MHz to 1000MHz is investigated.

#### 5.7.Test Results

**PASS.**

The test result please refer to the next page.
